LightStim LED Bed
said to promote total
body wellness

Light Years ahead

Light Emitting Diode (LED) are used in many things from televisions to car headlights. Less well known are its health properties, and it is these that the LightStim LED Bed draws on. It claims to offer a “soothing, natural and non-invasive treatment that promotes total body wellness and peak physiological function.” More specifically, the LED Bed is said to be good for fixing wrinkles, acne and building collagen. But there is a medical angle here as well - indeed it’s technology tested by NASA to heal wounds. LED light treatment is said to use four different light wavelengths to boost the body’s production of ATP (adenosine triphosphate), that carries energy within cells to where it is needed. It boosts nitric oxide, protects against cardiovascular disease, improves post-exercise recovery, improves circulation and releases endorphins. And despite looking like a tanning bed, it protects the skin from UV damage. The bed is available to buy and treatments are available at selected spas and wellness retreats.

PLUM JOB

Let the latest technology enhance your enjoyment of a glass of wine, and it makes those special bottles last longer

If you’re an oenophile, fond of imbibing a bottle or two at home, the chances are you have cupboards bursting with gadgets, all claiming to make the wine taste better or last longer when you occasionally open a bottle and don’t finish it.

Few of those gadgets work and most just end up gathering dust. Now, you can clear out the

cupboards and replace all the wine gadgets with Plum. This delightful piece of home entertainment hardware takes any standard size wine bottle (forget the magnums for now) regardless of closure (cork, screwcap or synthetic).

It pierces the foil and closure and pressurizes the bottle with argon gas.

It also reads and recognizes the bottle’s label, storing the wine at the perfect temperature and dispensing perfectly drinkable glasses for up to 90 days.

If all that isn’t enough, it is beautifully designed, with a seven-inch screen that displays information about the wine.

CASE IN POINT

Quality leather goods maker Mujjo is celebrating its fifth birthday with a collaboration with designer, and co-founder of Shibui.ch, Athanasios Babalis. The result - a gorgeous wooden case for the MacBook. Handmade in American walnut veneer, it is lined in Mujjo’s signature leather (padded with foam). This is a case for your MacBook that’s better designed than the laptop. Compatible with all 12in and 13in MacBooks, it is limited to just 50 pieces.
